

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PERIODICAL TABLES.

The following set of Tables for the Quarter ended 30th September, 1844, is characterized by some omissions which require explanation. In the Table showing the "Mortality" of the country at large, the columns showing the number of deaths registered annually, in each district, in the several years from 1838 to 1843 inclusive, are omitted, but they will be found already entered in Part III., p. 271. The Table of the "Prices of Provisions, Fuel, &c." is omitted, because few of the returns from which it had to be abstracted, were received at the office of the Poor Law Commissioners at the date of our sending the rest to press. The abrupt termination of the "Currency" Tables is caused by the provisions of the Act of the last Session (6 and 7 Vic. c. 32) requiring the issue of such returns only as do not supply the means of continuing them in their present form. In the next number they will be recommenced from the date of their termination, in the form enforced by the recent changes.

BILLS OF MORTALITY.

"The quarterly returns are obtained from 115 districts, sub-divided into 576 Sub-districts. *Thirty-four* districts are placed under the metropolis, and the remaining 81 districts comprise, with some agricultural districts, the principal towns and cities of England. The population was 6,578,912 in 1841."

The deaths registered in the last quarter (ending September 30th) were 38,784; or 141 less than the deaths (38,925) in the June quarter; and 1701 more than 37,083, the average of five previous September quarters. Allowing for the increase of population, the mortality will be found to be about the average of the summer quarter, (July, August, September); that quarter being now the least fatal in the year.

The deaths in the Metropolis amounted to 11,825; which are 354 more than were registered in the spring quarter, and 694 above the average uncorrected for the increase of population. *Small-pox* and *Scarlatina* were both epidemic. The deaths from *Small-pox* in the first week of the quarter were 36, in the last 37; from *Scarlatina* 58 in the first week, 85 in the last, and 99 in the tenth. *Measles* was fatal but to a small extent; *Typhus* showed a tendency to increase, for the deaths from this disease, including what is sometimes called "common continued fever," and "fever," amounted to 424; while the average is 352.

In the country districts the most remarkable increase of mortality occurred in Cornwall; in the Redruth and Penzance districts the following were the results of registration:—

	Average Annual Deaths in 5 Summer Quarters.	Deaths in the last Quarter.
Redruth	218	419
Penzance	216	475

Measles and *Hooping Cough* prevailed in both the districts. *Small-pox* has been epidemic in many districts all over the kingdom, and has proved fatal to great numbers, whose vaccination had been neglected.

The return includes the deaths of *nine persons* who were suffocated or trampled to death at Nottingham, whilst witnessing a public execution. At Stockport six persons were accidentally killed by the falling of a wall during a heavy storm of rain.

The mean temperature at the Royal Observatory, *Greenwich*, was 58°·9, or 2° lower than the mean temperature of *Greenwich* on an average of twenty-five years. The mean of the highest temperature of day was 66°·9, the mean of the lowest temperature of night 51°·4; the difference 15°·5. The highest temperature attained in the sun was 115° in the week ending July 27th; the lowest temperature on the grass in the same week was 40°·5; the temperature of the air ranged in the same week from 85°·1 to 53°·7. In the 13 weeks the lowest temperature of the air was 40°·6; of the grass on the ground 30°·0. The difference between the dew point and air temperature was 5°·3. The fall of rain was 5·38 inches.

Districts in which the Mortality was GREATER than the mean mortality of the corresponding quarter in the same district.—The west, north, and south district of the Metropolis, Portsea Island, St. Albans, Wycombe, Bedford, Colchester, Plymouth, *Redruth*, *Penzance*, Stroud, *Hereford*, *Shrewsbury*, Kidderminster, *Wolverhampton*, Birmingham, *Aston*, *Coventry*, Nottingham, Liverpool, West Derby, Blackburn, Chorlton, Bradford, *Merthyr-Tydfil*.

Districts in which the Mortality was less than the average Mortality of the corresponding quarter in the same districts.—Central districts of the metropolis, *Norwich*, *Devizes*, Exeter, Basford, Stockport, Macclesfield, Great Boughton, Bury, Prescott, Salford, Ashton, Sheffield, Hull, *Sunderland*, Tynemouth, *Newcastle-on-Tyne*, Pontypool, Wrexham.

MORTALITY OF THE COUNTRY.

Quarterly Table of the Mortality in 115 of the Districts of England (including the principal Towns) showing the Number of Deaths registered in the Six Years, the Average Number of Deaths in the Five Summers, 1838-42, and the Number of Deaths in the Summer Quarter of 1844, ending 30th September —(continued from p. 272.)

* The deaths in the Metropolis for the years 1840-1-2 have been derived from the weekly tables, the Returns for each year comprising 52 weeks, or 364 days. The last quarter in the metropolis ended Sept. 28, 1844. The returns from other places are for the years ending December 31, and the quarter ending Sept. 30.

† Wandsworth District is included in the return for the Metropolis.

MORTALITY OF THE METROPOLIS.

A Table of the Mortality in the Metropolis, showing the Number of Deaths from all Causes, registered in the 13 Weeks ending 28th September, 1844.

CAUSES OF DEATH.	Quarterly Average of Deaths in the Five Summers of 1839-43.	Deaths in the Summer Quarter ending Sept. 26, 1844.	CAUSES OF DEATH.	Quarterly Average of Deaths in the Five Summers of 1839-43.	Deaths in the Summer Quarter ending Sept. 26, 1844.
